- HTML, CSS, Bootstrap (+1 experience)
- Python (Basic) (no experience)

EXPERIENCE

Software Developer
Avanzar IT Consulting | Kolkata, India

February 2021
(Previous)

My primary role in this company was **Angular Web developer** ! I have worked on multiple angular websites of avanzarit and have built one demo website on a product label.

Along with that I have worked on **AWS services** like **Appsync** and **DynamoDB** and I'm comfortable with working on **GraphQL** and **Apache Velocity Template**

I have also worked on **Keycloak** which is an identity management solution and have successfully integrated its API on required projects..

I have used existing **MVC Spring Boot code Structure** to also create **java API endpoints** for websites so I also some knowledge of Spring Boot.java

I am also familiar with how **STRAPI(headless CMS)** works and how to use by calling its API endpoints.

Project 1:

Project Title: Task Management Angular Web Application

Role : Full Stack Web Developer

Type : Product

Description: The Task Management System is an application for tracking daily to-do lists of the company and track the performance through various MIS reports and charts. It also has a comment thread system for discussing a particular task. It is a dynamic project with different screen for different roles of the user.

Roles & Responsibilities:

- Was sole owner of the whole project under the guidance of my project manager
- Implemented the full cycle of the project front end , middleware and backend using angular and aws services like dynamodb, appsync and lambda

Environment: HTML, CSS, TypeScript, Angular (Framework), AWS Services (lambda, DynamoDB, Appsync)

Project 2:

Project Title: Crestest Education Portal

Role : Full Stack Web Developer

Type : Product

Client : Crestest Venture LLP

Description: Crestest Portal is a product which is similar to Vedantu platform. It consists of admin portal, website , Main portal , Online video class and exam portal

Roles & Responsibilities:

- My role was primarily as angular developer for implementing complex logic and API integration and data modelling in the front end in main portal , admin portal and exam portal
- Worked on Payment Gateway and invoice bill application in node.js using axios and simple query.

Environment: HTML, CSS, TypeScript, Angular (Framework), AWS Services (lambda, DynamoDB, Appsync) , Strapi, Clickhouse, KeyCloack, October CMS, Java

Project 3:

Project Title: Weighbridge Solution Angular App

Role : Full Stack Web Developer

Type : Product

Description: Weighbridge solutions is a portal for recording the weight taken by weighbridge in plants .it is an automated process where the weight directly gets filled in the website through live web socket programming when the weight of the truck is measured.

Roles & Responsibilities:

- My role was primarily as angular developer for implementing complex logic and API integration and data modelling in Strapi

Environment: HTML, CSS, TypeScript, Angular (Framework), Strapi, Mysql, Python.
