2016	**MEERUT INSTITUTE OF ENGINEERING &TECHNOLOGY** BTECH(Electronics & Instrumentations) 59.03%

KEY SKILLS

Creativity

Problem solving

Active listening

Decision making

Communication

Critical thinking

PROJECTS

Devops project1(CI/CD pipeline)

developer created docker file and pushed in github

i created jenkins server and invoke with github so jenkins pull the code from github

i define job in jenkins where jenkins build the image through dockerfile , i did not take any other host to build the image i created ansible server where docker is also present.

i used dockerhub as ragister store where image was stored.

i created kubernetes cluster where one is master node and two worker node.

i have created playbook over ansible server where i define that go to kubernetes server and creat deployment .

kubernetes pull the image from dockerhub directly and run the aplication at container.
